### DFB-10XX-YY-300-GS
Fiber Coupled Gain-Switched Distributed Feedback Laser Diode

**Features:**
- 300 mW peak power
- 50 ps pulse duration (FWHM)
- Optional: RF connector (SMB)
- Optional: Impedance matching (50 Ohm)

**Application:**
- Fiber laser seeding
- Equipment calibration

---

TYPICAL PERFORMANCE for reference only
Test conditions: @ operating point, case temperature 25°C.

Pulse shape
RF-module, AVN-4-C-M-PN pulse generator; triggered by split optical signal; 50ps/div

Lasing spectrum
10pm resolution

THERMISTOR SPECIFICATION
Parameters | Value | Unit
---|---|---
Thermistor type | NTC | |
Resistance @25°C | 10 ± 0.1 | kOhm
Beta 0-50°C | 3375 | |

FIBER SPECIFICATION
Parameters | HI1060 | PM980 | Unit
---|---|---|---
Numerical aperture (Typical) | 0.14 | 0.12 | |
Cutoff wavelength | 920±50 | 900±70 | nm
Mode-field diameter (@1060nm) | 6.2±0.3 | 6.6±0.3 | μm
Cladding diameter | 125±1 | 125±1 | μm
Core-to-cladding offset | ≤0.5 | ≤0.5 | μm
Length | 1.0 ± 0.1 | 1.0 ± 0.1 | m
Connector | FC/APC (narrow key) | |

Connector alignment to PANDA Fiber

8. RF connector (SMB, positive pulse)
SAFETY AND OPERATING INSTRUCTIONS

The light emitted from this device is invisible and can be harmful to the human eye. Avoid looking directly into the fiber connector when the device is in operation. Proper laser safety eyewear must be worn during operation with open connector.

Absolute Maximum Ratings may be applied to the Laser Diode for short period of time only. Exposure to maximum ratings for extended period of time or exposure to more than one maximum rating may cause damage or affect the reliability of the device. Operating the Laser Diode outside of its maximum ratings may cause device failure or a safety hazard. Power supplies used with the component must be employed such that the maximum forward current cannot be exceeded.

A proper heatsink for the Laser Diode on thermal radiator is required. The Laser Diode must be mounted on radiator with 4 screws (bolt down in X-style fashion with initial torque set to 0.075Nm and final X-style bolt down at 0.15Nm) or with clamps. The deviation from flatness of radiator surface must be less than 0.05mm. It's recommended using of Indium foil or thermal conductive and soft material between bottom of the case and heatsink for thermal interface. It's undesirable to use thermal grease for this.

Avoid back reflection to the Laser Diode. It may give impact on the device performance in aspects of spectrum and power stability. It also may cause fatal laser diode facet damage. Using of optical isolators is highly recommended to block back reflection.

Do not pull the fiber. Do not bend a fiber with a radius smaller than 3 cm. Operate the laser module with clean fiber connector only. Periodically check and clean the connector if necessary. To clean the connector use a clean-room compatible tissue only, put some Isopropyl alcohol onto it and carefully clean the facet of the connector, or use special fiber cleaning tools. Perform cleaning only with the laser current switched off.

Electrostatic discharge can lead to device failure. Take necessary precautions to prevent ESD.

Example of Part Number Identification
DFB-1064-PM-300-GS -> 300mW pulse power at wavelength 1064nm, PM-980 fiber
DFB-1064-HI-300-GS -> 300mW pulse power at wavelength 1064nm, HI-1060 fiber
DFB-1030-PM-300-GS-RF -> 300mW pulse power at wavelength 1030nm, PM-980 fiber, module with RF connector

NOTE: Innolume product specifications are subject to change without notice.
